

Trade in Value Added (TiVA): Gross exports by final destination

■ Abstract

The **Trade in Value Added (TiVA)** database consists of a set of measures that aim to provide better insights into global production networks and supply chains than is possible with conventional trade statistics.

See [TiVA web page](#).

Gross exports by origin of value added and final destination, presented here, is derived from the latest version of the **OECD's Inter-Country Input-Output (ICIO) Database** and provides estimates of gross exports by industry i in country c , broken down by the value added originating from source country/region s and, according to the final demand destination country/region p .

Estimates are provided for country c , industry i , exports of final goods and services (FD_EXGRFNL_VA), exports of intermediate goods and services (FD_EXGRINT_VA) and total exports (FD_EXGR_VA), and can reveal whose final demand drives a country's exporting activities.

These indicators can also show how value added originating in source country s may rely on the exporting activities of industry i in country/region c to reach final demand in country/region p .

However, note that the same value added originating from source country s can be present in the gross exports of more than one exporting country c (as embodied value added, from upstream production, may cross national borders many times). In general, therefore, these estimates should be viewed from the perspective of an exporting country c .

For a description of the method used for calculating these estimates using the ICIO, see the [TiVA indicator definitions document](#).

■ Date last updated

December 2016

■ Unit of measure used

Millions US Dollar

■ Variables collected

- FD_EXGR_VA Gross exports by origin of value added and final destination
- FD_EXGRFNL_VA Gross exports of final products by origin of value added and final destination.
- FD_EXGRINT_VA Gross exports of intermediate products by origin of value added and final destination.
